Bash Shell Scripting

Loop control statements or commands (break and continue)

```
#!/bin/bash
```

Learn how to automate common tasks using bash shell scripting

break and continue:

- break and continue commands are used to control the execution of loops.
- **break:**
  - break command is used to terminate/exit current loop completely before the actual ending of loop.
- **continue:**
  - Continue command is used in script to skip current iteration of loop & continue to next iteration of the loop.
