

Bash Shell Scripting

Operations on Strings

```
#!/bin/bash
```

Learn how to automate common tasks using bash shell scripting

Operations on Strings:

- Finding the String length
- Concatenation of strings/Join two or more paths
- Convert strings into lower/upper case
- Usage of `dirname` and `basename` on strings/paths
 - `dirname` : strip/removes last component from file name
 - `basename` : strip/removes directory and suffix from filenames
- String slicing or extracting portion of a string
